COSYLAB

Cosylab provides system integration and customer adapted products and solutions, covering the complete area of control systems and instrumentation. It is specialized in accelerators, both for particle therapy and scientific research, as well as tokamaks and radio-telescopes.

Cosylab employs over 200 people, in majority engineers and physicists, who are expert developers and integrators of state-of-the-art software and electronics. Cosylab offers deep inside knowledge and industry-standard development processes that include systems engineering, project management and quality assurance.

Services: Software development for accelerator applications, Medical device engineering, Engineering partnership, Medical Verification and Validation of PT systems, Safety system design and Implementation, Timing system design and Implementation.

Industries: Particle therapy, Big Physics, New Energy, Space & Astronomy.

Cosylab is interested in establishing new business and R&D (science) partnerships to match its core competencies (services and industries) for the R&D projects in Israel and in the region. It is also interested in new opportunities for investing in start-up businesses in their domain, and in attracting new partners for the business collaboration combining the investment in Cosylab, and best practice sharing in early stage financing. It also wishes to get more familiar with the Big Physics and other core domain projects and stakeholders for the R&D and business collaboration

KOLEKTOR SISTEH

Kolektor Sisteh was established by merger of the companies Kolektor Sinabit and Kolektor Synatec in purpose of strengthening the position of a leading Slovene provider of solutions, services and equipment for automation and information flow in industry and economy.

The vision of the company is to develop technologically advanced and innovative solutions for a wider international market including technological engineering for various branches of industry, energy, buildings and municipal infrastructure.

The company is looking for international partners to develop cooperation in electronic and electrical engineering equipment, proper devices and systems for automation and information flow of processes, machines and devices. It is also interested to cooperate in the field of services for optimisation of infrastructures.

www.kolektorsisteh.com

KYURIOSITY VENTURES

Company's business activities are wealth management, investments, and management. The goal is to understand the Israeli start-up ecosystem with the purpose to replicate its success in Slovenia and to meet with likeminded local entrepreneurs and angel investors.

www.kyuriosity.com

LIVENETLIFE INTERNATIONAL

LIVENETLIFE is the top live traffic information provider for premium online media publishers in Slovenia. It enables premium online publishers to showcase and leverage their real time traffic to boost community, discovery and monetization. The company's real time traffic widgets receive more than 150M monthly impressions.

LIVENETLIFE is interested in meeting Israeli ad-tech companies, online publishers and potential ad-tech investors. It would also be happy to receive feedback on its service from ad-tech leading companies and investors.

NATIONAL INSTITUTE OF CHEMISTRY

The Institute has eleven (11) research departments, which perform excellent research in the fields of:

- health and biomedicine,
- environmental protection,
- circular economy,
- sustainable energy,
- food safety.

It also applies computational approaches implemented for high performance computing, as well as theoretical methods that have constant feed-back to experimental IR and NMR spectroscopy. With

industry the Institute can perform R&D collaboration, offer consulting and licensing opportunities, perform contract analytical services and enable possibilities to form project consortiums.

The Institute is interested in cooperation with investments bodies for setting up pilot production capabilities; R&D collaboration and funding for biomedicine related innovations; and licensing opportunities on general, for all fields of research. The aim is to find partners that can enable the Institute to raise the Technology Readiness Level of its innovations. It also expresses interest in obtaining new knowledge about technology management and commercialisation.

NINAZ

Company's business activities include investing in equities, bonds etc. It is focused on angel and VC investing, especially in Slovenia. The company is interested in Israel's start-up ecosystem, especially VC funds and Angel clubs. It is setting up a venture capital fund focused on Slovenia and it would therefore welcome any established best practices from Israel.

Rok Zorko is a co-founder of Outfit7, which had a \$1 billion exit in 2016. He is now trying to give back to the Slovenian start-up community by investing in start-ups and mentoring them.

POŠTA SLOVENIJE (Post of Slovenia)

Pošta Slovenije is wholly owned by the Republic of Slovenia. With its nearly 5,500 employees, it plays an important role in Slovenian society. As a universal postal service provider, it guarantees access to postal services in line with statutory requirements. Besides providing the universal postal services, its focus is also providing logistics and IT services. Company's business strategy for the future includes ambitious goals that are at the same time concrete and achievable. The key emphasis is on new services and on building up existing services: parcel and direct mail deliveries, morning newspaper deliveries, supply chain logistics and i-services for private customers, businesses and government clients.

The company is at an important point on its journey to transform itself from a provider of traditional postal services into a modern, development-focused postal logistics operator and provider of electronic services. The interest of Pošta Slovenije is to get in touch with ambitious start-up teams and companies for the development of innovative solutions and services in its key strategic areas (Delivery optimization, Smart logistics, E-commerce etc.).

SMART OPTOMETRY

Smart Optometry LTD is a start-up company, which is developing advanced software solutions for eye care, ranging from eye testing to vision therapy. The company has two own products: Smart Optometry application for eye doctors, which attracted more than 70,000 eye care professionals so far, and AmblyoPlay vision therapy for children who suffer from lazy eye (approx. 50 million children). Smart Optometry LTD also develops proprietary eye care related software solutions for third parties, namely specialised pharmaceutical companies. The foundation for all of this is a strong domain knowledge from the field of eye care, as well as good partnership with leading European eye care specialists.

The company is interested in getting to know the exemplary Israeli health/med-tech sector. It would mainly like to look for partners, which could cooperate with Smart Optometry Ltd in the field of distribution, advertising, development of proprietary eye care or health software, and research collaboration.
